

Americans in Space

Projects Mercury, Gemini & Apollo

When President Kennedy proffered the goal of “landing a man on the moon and returning him safely to the earth”, the nation had flown in space once, for 15 minutes. The exhibit traces our nation’s path through three periods of manned space exploration. Project Mercury (1959-1963) mixed monkeys, robots and America’s first space pilots in a Space Race with the Soviets. Project Gemini (1962-1966) introduced computers in orbit, fuel cells to generate electricity, docking two spacecraft and walking in space. The exhibit concludes with the triumphant Project Apollo (1960-1975) which saw a dozen Americans walk on the Moon and program end with orbital *rendezvous* and docking with the Russians.

Plan

Chapter 1 Project Mercury	2-32
Chapter 2 Project Gemini	33-75
Chapter 3 Project Apollo	76-128

In keeping with *Federation Internationale de Philatelie* (FIP) regulations for Astrophilately, cancels in this exhibit conform to the principle that the story of the conquest of space is best told postmarked on the date and closest to the entity controlling the event.

Significant items have red border

Project Mercury

“Tossing a man up in the air and letting him come back...is about the same technical value as the circus stunt of shooting a young lady from a cannon...”

Hugh Dryden, NACA 1958

The 1950s was a golden age of aviation in America. Test pilots at Edwards and elsewhere were constantly expanding the limits of aeronautical science, licking the outside of the envelope, in astrophilatelic parlance. The speed of sound, conquered just a few years before, was now routinely exceeded by production line Air Force fighters. Modified F-104 Starfighters were flying zoom profiles that brought them to the highest reaches of the usable atmosphere. And then came the X-15. An aircraft with the performance characteristics of a V-2 missile, it flirted with outer space at a time when space travel was relegated to science fiction.

In 1957 James McDonnell of McDonnell Aircraft gave a commencement address to an engineering school in which he predicted that the first manned Earth satellite would take place between 1990 and 2005. After the Soviets successfully launched an orbiting satellite a few months later it became clear to both the Eisenhower Administration and the Department of Defense that America would put an American into orbit. In less than 2 years McDonnell would sign a contract worth \$18.3 million to serve as prime contractor for the Mercury spacecraft.

NASA Project A, announcement no. 1, dated December 22, 1958, sought GS-12 to GS-15 pilots for the position of “Research Astronaut-Candidate”. Project Mercury had been announced the previous week. Successful applicants would be college prepared military test pilots with at least 1500 hours of flying time and be qualified in jets. The Pentagon was able to identify more than 100 men who met the criteria.

In the end seven men were selected. Shepard would fly first, be grounded for years, and then return to golf on the moon. Grissom would almost drown, command the first manned Gemini mission, and then die while preparing the first Apollo capsule. Glenn

would circle the globe, become a Senator and run for President, and then ride the Space Shuttle as the oldest human to orbit at 77. Carpenter would have 4

hours in space, leaving as the only American to fly into space only alone. Schirra would command Mercury, Gemini, and Apollo spacecraft before hanging up his helmet. Cooper would be the last American to venture into space alone. He returned to fly in the follow on program – Project Gemini. Slayton would be grounded before he had a chance to fly. As fate would have it, 13 years later, he got his chance on the final flight of the Apollo program. Ironically, the space race that had been a competition with the Soviet Union ended on his mission with the first joint Soviet/US flight.

When Yuri Gagarin flew in 1961 the flight controls were locked. A code from Mission Control was required if he was needed to pilot the capsule. Similarly, the early Mercury flights could have been successfully flown by autopilot. Robot and astrochimps proved that. By the end of the program, however, not having an astronaut pilot in the loop made mission success impossible. The need for an ape had evolved into the need for a man.

“Man is the deciding element...As long as Man is able to alter the decision of the machine, we will have a spacecraft that can perform under any known conditions.”

Chris Kraft, NASA 1963

BJ-1 Port Canaveral Hand Cancel 09 Sept 1959

Little Joe -1 (LJ-1) was a failed attempt launched from Wallops Island on 21 Aug 1959. This was followed on 9 Sept 1959, by a boiler plate Atlas test carrying a letter addressed to Robert Gilruth:

This note comes to you after being transported into space during the successful flight of the “Big Joe” capsule, the first full-scale flight operation associated with Project Mercury.

MA-9

USS Kearsarge Hand Cancel

16 May 1963

Dating back to Grissom's first flight in 1961 envelopes have occasionally been carried of recovery aircraft. While this became fairly common in the Skylab era they remain rare during Mercury.

Project Gemini

"I feel red, white and blue all over."

Edward H. White II, June 1965

Project Gemini was an afterthought. In the late 50s the concept of a man riding a rocket to orbit slowly percolated in both military and civilian aerospace circles. A natural progression from mice to monkeys and on to man can inexorably be traced. These same groups dreamed of flying rings around the moon.

In May 1961, President Kennedy challenged the nation to land a man on the moon and return him safely to the earth. Alan Shepard had strapped on an Army Redstone missile for a 15 minute suborbital ride. He had traveled 302 miles while a trip to the moon would be a quarter of a million miles and take a week.

Moving from the theoretical to reliable hardware would require several important steps. The Russians were way ahead with heavy lift capability. We would need to ramp up booster development. We needed to move from a ballistic capsule to a piloted spacecraft, one that had precise navigation and control features. Another big problem to overcome was consumables – sufficient propellant, oxygen, water, and electricity to last for several days instead of a scant few minutes.

This was an age for new materials, processes and ideas. Real time complex computing, advances in inertial navigation, fuel cells that generate electricity and water all made great leaps. As an alternative to a massive direct ascent moon rocket, NASA created the requirement to control two missions at the same time, conduct extravehicular activities (space walks), and rendezvous and dock in space.

Some technologies would prove premature for the breakneck speed of the Space Race. The Parasail concept of a runway landing using the hang glider designed by Ragallo was shelved in favor of the well-tested and reliable parachute. Ejection seats used at altitude spawned a proposal for a cross between a balloon and a parachute (a ballute). It too would be put aside.

In two productive years Project Gemini flew 10 increasingly demanding manned missions. By its conclusion in 1966, NASA had accomplished long duration flight, deftly handled emergencies on the ground (Gemini VI) and in flight (Gemini VIII), and charted a path for Project Apollo.

Gemini-related
St Louis Hand Cancel
24 Jun 1963

McDonnell Aircraft built the Mercury spacecraft. When the Gemini program commenced they won the subsequent contract as well. A month after the conclusion of the Mercury flights (and 6 months before he resigned from NASA) John Glenn was in the trainer working on rendezvous and docking procedures.

The NASA Motor Vessel (MV) Retriever was a Landing Craft Utility (LCU) built for the U.S. Army in 1953. LCU-15301 was acquired from the Army in 1963. After modifications (the sides of the vessel's midsection were cut down, a new bridge built, and a hoist added), it arrived at its Seabrook, Texas docking facility near the NASA Manned Spacecraft Center (MSC) in June 1963. The modified Army LCU, painted NASA blue and white, was named "Retriever" to signify its mission of recovering spacecraft. The LCU was selected because its shallow draft, which allowed it to operate in Galveston Bay as well as in the Gulf of Mexico off of Galveston, Texas.

Gemini-related

Galveston Machine Cancel

28 Jun 1963

As an open sea test facility, Retriever was used for Gemini and Apollo spacecraft drop tests from aircraft, uprighting tests, flotation collar tests, and qualification of shipboard recovery equipment. It was also used to train all flight crews for post splash-down ocean recovery operations and water egress training from their Gemini spacecraft and Apollo command modules until 1972. With the cancellation of plans to land the Gemini spacecraft using an inflatable wing and skids, the US Navy resumed training to rescue and recover at sea. Here conducted aboard the USS Escape and postmarked on return to port at Norfolk.

29 Aug 1965

The Earth's rotational rate is 360.98 degrees per day. The programmer rounded the value to 360 resulting in an undershoot of 130 km. The error would have been greater but Cooper recognized the mistake and slew the craft 90 degrees instead of 53 to minimize the problem.

GT-V

USS Lake Champlain Type II Hand Cancel

29 Aug 1965

A larger Hand Cancel (36 mm vs. 33 mm) appears with the Navy rubber stamp cachet. 10,265 personnel, 114 aircraft and 19 ship participated in the recovery efforts.

GT-VI

Kennedy Space Center Machine Cancel

25 Oct 1965

Although this was the maiden voyage in Project Gemini, Agena had flown on more than 140 missions since 1959. Here the KSC Official cachet is joined by Goldey artwork. Within minutes after the 10 o'clock launch, indications at Mission Control in Houston were that something was wrong with the booster. The Agena seemed to be wobbling, even as its attitude control system labored to keep it stable.

GT-VI

Patrick Air Force Base Hand Cancel

25 Oct 1965

Very scarce Patrick AFB Roller Cancel. Officials responsible for the Eastern Test Range conducted a hasty study of partial telemetry data from the booster. No clear indication of the failure surfaced.

GT-VI

Patrick Air Force Base Machine Cancel

25 Oct 1965

Nice selection of tracking ship personnel autographs on a seldom seen "scrub" cover. The two line USNS Rose Knot tied to the stamp is not an official Post Office cancel. That would have to wait until the ship returned to port on November 8. Note the CapCom for this unmanned launch is not an astronaut.

GT-VI

Cape Canaveral Machine Cancel

25 Oct 1965

Back at the Cape, Schirra and Stafford sat atop their Titan II missile. Borman and Lovell were at the KSC Launch Control Center listening to an audacious plan by John Yardley to launch GT-VII to meet up with GT-VI in space. "Why couldn't we launch a Gemini as a target instead of an Agena?"

GT-VI

Port Hueneme Machine Cancel

25 Oct 1965

Throughout the US manned space program control centered on ground based facilities and personnel. Onboard computers were nascent (or non-existent) and analysis and decision making so complex that thousands participated. To receive spacecraft data (downlink) and transmit instructions (uplink) a continuous worldwide network of transmitters and receivers were required. Since these were "line of sight" ships were required to supplement ground based tracking stations.

GT-VI

USS Wasp Hand Cancel

25 Oct 1965

What appears to be a test impression (no stamp) on what would have been the Prime Recovery Ship. Artwork by Morris Beck is joined by a ship design on aircraft stationary.

GT-VII

Kennedy Space Center Machine Cancel

4 Dec 1965

This KSC Official addressed the founder of the KSC Philatelic Society. This grueling flight was designed to test whether man and machine could fly for two weeks. A new, lightweight spacesuit proved critical as did taking books for pleasure to pass the time.

GT-VII

Freeport Machine and Hand Cancel

4 Dec 1965

After five days, they had performed four orbital adjustment burns that put them in a circular 300 km orbit. This meant that GT-VII could stay aloft for at least 100 days without the orbit degrading, more than stable enough to serve as the passive rendezvous for GT-VI-A.

GT-VI-A

Cape Canaveral Machine Cancel

15 Dec 1965

On 12 Dec Schirra and Stafford were loaded on Pad 19 and ready to fire. The countdown clock went to zero, the spacecraft clock started and the rocket roared to life. Just 1.2 seconds later the engines shut down. They felt no movement. Schirra said, "We're just sitting here breathing."

GT-VI-A

Kennedy Space Center Machine Cancel

15 Dec 1965

Following the braking and translation maneuver, VI-A coasted until the two vehicles were 40 meters apart, with no relative motion between them. They flew in formation for five hours, at times within 30 cm of each other. For the first time true rendezvous had been achieved.

GT-VI-A

USS Wasp Hand Cancel

16 Dec 1965

Envelope addressed to Air Force MGEN Edward H. White. His son, Ed White II, had just become the first American to walk in space in June. Note the variation in artwork. Here it shows two capsules while in the next it shows the original GT-VI mission to dock with an Agena.

GT-VI-A

USS Wasp Hand Cancel

16 Dec 1965

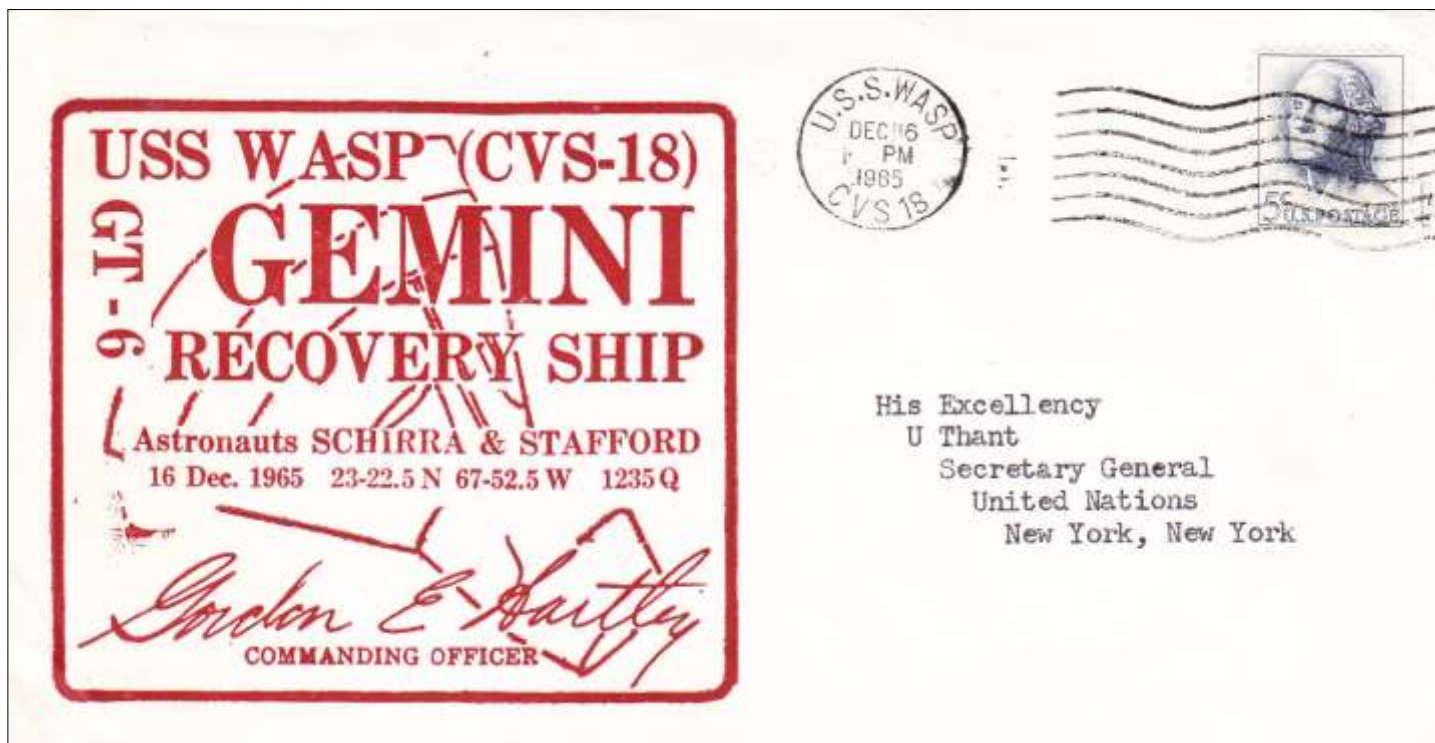

*Machine cancel with inverted year.

GT-VI-A

USS Wasp Machine Cancel

16 Dec 1965

Landing 13 km from the planned impact point, GT-VI-A recorded the first successful controlled reentry, commemorated here with a Captain's cover addressed to the UN Secretary General.

GT-VII

USS Wasp Hand Cancel

18 Dec 1965

A Captain's cover for GT-VII. On this day Robert Gilruth held a post-recovery press conference in which he declared "A fabulous year for manned space flight." Since March NASA had put 10 men in orbit, performed EVA, conducted eight- and 14-day flights and accomplished a rendezvous.

As the KSC Official artwork illustrates, the two objectives were to dock with the Agena and perform a two-hour spacewalk. This was to be the first orbital docking ever. Easing the last few feet at three inches per second, Neil Armstrong reported his progress through Rose Knot Victor to Mission Control. "Flight, we are docked! It's a real ... really a smoothie – no noticeable oscillations at all."

While docked with the Agena, GT-VIII began a gentle left roll. Armstrong cancelled it for four minutes until it became clear their propellant was down to 30 percent. After disconnecting from the Agena, the roll increased to a revolution per second. Thruster number 8 was stuck open.

GT-VIII

USS Boxer Machine Cancel

17 Mar 1966

Over China, GT-VIII slipped into the fringes of the atmosphere. "Do you see water out there?" Armstrong asked. Concern mounted since the capsule might not survive touchdown on land. "Oh, yes, there's water! It's water! LANDING-SAFE," exclaimed pilot David Scott.

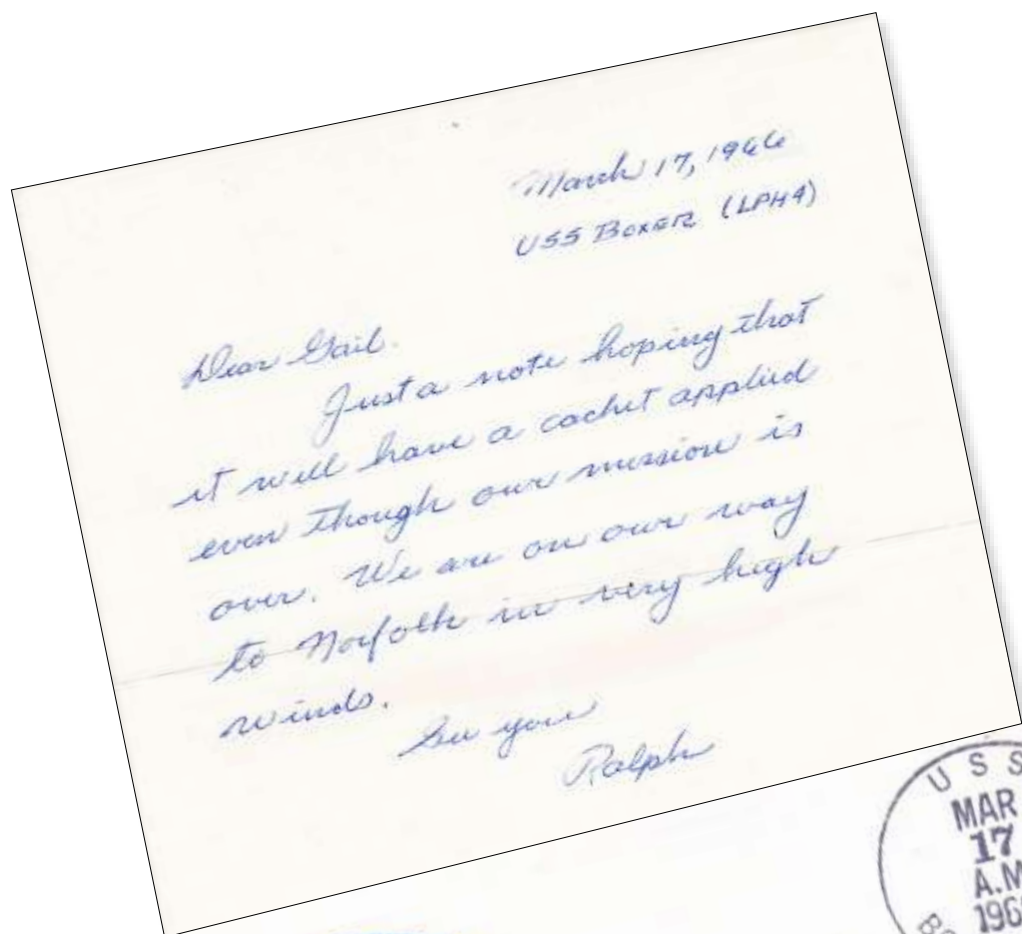

GT-VIII

USS Leonard F. Mason Hand Cancel

17 Mar 1966

Following the brief 11-hour flight that aborted the planned spacewalk, the crew ditched 800 km east of Okinawa in the Pacific instead of the planned Atlantic recovery. Original artwork accompanies the hand cancel from the destroyer that made the rescue.

GT-VIII
USS Boxer Hand Cancel
17 Mar 1966

Crew mail with uncommon Hand Cancel and enclosed letter. USS Boxer was the Designated Prime Recovery Ship (PRS) but a stuck thruster forced Neil Armstrong and David Scott to abort their mission and land in the Pacific Ocean instead. To add insult to injury, the ship returns to Norfolk both empty-handed and in foul weather.

GT- VIII
USS Boxer
Hand Cancel
17 Mar 1966

This printed cachet appears to be a Beck CREW (no number) but it is not. Usually a rubber stamp (like on the preceding page) is used. In this case it is suspected that this was printed onboard the ship.

Gemini-related

Cape Canaveral Hand Cancel

17 May 1966

AGENA TARGET VEHICLE

Launched from Cape Kennedy, Florida, May 17, 1966 to rendezvous and dock with Gemini-9. An engine swiveled out of control plunging the rocket into the Atlantic.

For two minutes everything was normal. Then one engine gimbaled and locked in a hardover pitchdown position. The whole combination – Atlas and Agena – flipped over in a nosedive and headed like a runaway torpedo back to the Cape before plunging into the Atlantic.

Gemini-related

Cape Canaveral Hand Cancel

1 Jun 1966

AUGMENTED TARGET DOCKING ADAPTER

Launched into orbit from
CAPE KENNEDY FLORIDA
June 1, 1966 to dock with the
GEMINI—9 FLIGHT

GT-IX was eager to meet up with their replacement Agena until they saw the unreleased shroud. "It looks like an angry alligator," Stafford remarked. Lanyards had mistakenly been taped, holding the shroud together after the explosive bolts fired. No docking could occur.

GT-IX-A

Kennedy Space Center Machine Cancel

3 Jun 1966

The Prime crew, See and Bassett, died when bad weather caused their jet to crash into the building constructing their spacecraft. The backup crew, Stafford and Cernan, would make the flight.

GT-IX-A

Webster Machine Cancel

3 Jun 1966

With no docking possible, Cernan performed his EVA to test the Astronaut Maneuvering Unit (AMU), a jet backpack stowed on the adapter module. His faceplate was fogged, his heart rate soared at 195 beats per minute, and doctors feared Cernan would pass out. With this the EVA ended.

GT-IX-A

Grand Turk Hand Cancel

3 Jun 1966

Since the "Mark I" eyeball attempts to rendezvous attempted by Gemini IV tremendous strides had been made in orbital computational science. In the vicinity of Grand Turk, just six minutes into the flight, Stafford fired the spacecraft thrusters for phase adjustment. After 49 minutes a second burn to circularize the height was undertaken. A final burn corrected for out-of-plane errors.

GT-IX-A

St. John's Machine Cancel

3 Jun 1966

Although the Agena was in a slight roll and retained the shroud which precluded docking Stafford and Cernan were able to make three rendezvous with the ATDA and station keep at distances down to a few centimeters.

GT-IX-A

USS Wasp Machine Cancel

6 Jun 1966

Computer controlled reentry worked perfectly, resulting in splashdown just 700 meters from the planned landing site and close enough to see the Prime Recovery Ship.

GT-IX-A

USS Wasp Hand Cancel

6 Jun 1966

With the carrier in view Stafford and Cernan opened both hatches and enjoyed the gentle rolling sea. Then they stuck out their thumbs to hitch a ride home. This Captain's cover artwork is found on various envelope sizes.

GT-X

Kennedy Space Center Machine Cancel

18 Jul 1966

After docking with their Agena and using it to boost them to 763 km, Michael Collins made his way over to the dormant Agena left by the Gemini VIII crew. With no electricity on board, the second Agena the rendezvous was accomplished with eyes only – no radar.

John Young described the Agena ride: "We were thrown forward in our seats. Fire and sparks started coming out the back end of that rascal. The light was something fierce, and the acceleration was pretty good. I never saw anything like that before, sparks and fire and smoke and lights."

GT-X

Grand Turk Hand Cancel

19 Jul 1966

Grand Turk Island is in the Turks and Caicos Islands in the Caribbean. The name comes from a species of cactus, the Turk's Cap Cactus. Founded by Bermudan Salt Rakers three hundred years ago, the island was first settled by ancestors of the Tainos. Archaeological remains have been dated to the 8th century.

GT-X

Freeport Hand Cancel

21 Jul 1966

Joe Frasketi was an NASA contractor who single-handedly created the astrophilatelic field of tracking station cover collecting. His autograph is often seen on station envelopes where he worked. Frasketi remains an active space event cover dealer into the second decade of the 21st century.

GT-X

Cape Canaveral Machine Cancel

18 Jul 1966

John Young described the Agena ride: "We were thrown forward in our seats. Fire and sparks started coming out the back end of that rascal. The light was something fierce, and the acceleration was pretty good. I never saw anything like that before, sparks and fire and smoke and lights."

U.S.S. Guadalcanal

Hand Cancel

21 Jul 1966

A Captain's cover generally has artwork specifically created to commemorate the honor of recovering astronauts from space. In this rather simple design, the outline of the aircraft carrier is framed by the spacecraft falling from orbit. This is then framed by a generic capsule shaped somewhere between a Mercury and Gemini spacecraft. This Captain's cover is rarely seen.

Gemini-related

Cape Canaveral Hand Cancel

12 Sep 1966

After two false starts the Atlas-Agena rocketed into space. In order to perform a first orbit docking, the launch windows would be very small. GT-X had 35 seconds and GT-XII had 30 seconds. In contrast, Gemini XI would have only 2 seconds. They made it with 1.5 seconds to spare.

GT-XI

Cape Canaveral Machine Cancel

12 Sep 1966

Not only did the crew rendezvous in a single orbit but 56 percent of their fuel still remained. For the spacewalk Conrad pushed Gordon towards the Agena but missed. He pulled on the umbilical to drag him back and pushed again. EVA remained exhausting. Gordon lasted only 33 of the planned 107 minutes.

GT-XI

Kennedy Space Center Hand Cancel

12 Sep 1966

The postmaster at KSC created a limited number of cachets in alternate colors, perhaps as favors to friends or as a way of generating a little extra income. The blue, seen here with the uncommon Hand Cancel, is joined by a proof-like version in red.

GT-XI

St. Johns Hand Cancel

12 Sep 1966

Joe Frasketti orchestrated tracking station covers from as early as Project Mercury's monkey flights until after the first manned landing on the Moon. The circular rubber stamp is from a set sold by Morris Beck to dealers and collectors.

GT-XI

USS Guam Hand Cancel

15 Sep 1966

Previous commanders had used the spacecraft's offset center of gravity to generate lift for changes in direction. This enabled corrections of up to 550 km downrange and 50 km crossrange. For GT-XI, the computer controlled automatic reentry, made the corrections and landed less than 5 km from the USS Guam. The cover shown here has the Captain's artwork (also found on other sized envelopes) and printed signatures.

MOL

Cape Canaveral BACKDATED Hand Cancel

3 Nov 1966

A large percentage of Orbit Covers have backdated postmarks. The cancel is characterized by a missing chunk from the "C" in "Cape" and a "Plugged 9" in the zip code.

MOL

Cape Canaveral Machine Cancel

3 Nov 1966

For years the Air Force worked to create a military capability in space. Dyna-Soar morphed into the X-20 which died under Defense Secretary McNamara. In this Blue Gemini plan USAF astronauts would spend 30 days in the attached booster, conducting reconnaissance. Of 17 selected there were 14 at the time the program was cancelled. The half below the age of 35 were absorbed into NASA and all flew on the Space Shuttle.

MOL

USS La Salle SUSPECT Hand Cancel

3 Nov 1966

Carnarvon Hand Cancel

12 Nov 1966

Carnarvon – call signal, CRO – was situated in northwestern Australia. Operated by the Weapons Research Establishment (WRE) – Department of Supply, Commonwealth of Australia, it functioned as a primary network station.

GT-XII

USS Wasp Machine Cancel

15 Nov 1966

During reentry a pouch containing books, filters, and small pieces of equipment broke free from the Velcro on the sidewall and landed in Lovell's lap. The pilots had unstowed the D-rings that activated the ejection seats and were holding them down between their legs. He squeezed his knees together and hoped the pouch would go no further. It did not.

GT-XII

USS Wasp Hand Cancel

15 Nov 1966

This Captain's cover celebrates the successful end of Gemini. Landing only 5.5 km from the carrier, the astronauts were on deck aboard the USS Wasp 28 minutes after touchdown.

Project Apollo

"We choose to go to the moon in this decade and do the other things, not because they are easy, but because they are hard, because that goal will serve to organize and measure the best of our energies and skills, because that challenge is one that we are willing to accept, one we are unwilling to postpone, and one which we intend to win."

President John F. Kennedy September 1962

The author was 10 years old when Neil Armstrong and Buzz Aldrin landed on the moon. I distinctly remember thinking that the rest of my life would be divided in two. Those things that happened before men walked on the moon and things that happened after.

Today, the accomplishment remains as unbelievable as it was before it happened. To leave the planet with two spacecrafts, travel a quarter of a million miles, rendezvous in lunar orbit, land and return home safely is remarkable. The historian Arthur Schlesinger declared, "The 20th Century will be remembered, when all else is forgotten, as the century when man burst his terrestrial bonds."

Apollo represented a departure. It was the first program that had astronauts riding launch vehicles designed for civilian exploration and not military might. Shepard and Grissom rode the Redstone, an Army intermediate range missile. Glenn and other Mercury pilots who followed flew on Atlas missiles. During the Gemini program NASA switched to the Air Force Titan.

To get to the moon, America required more than Army artillery or Air Force ICBMs. In 10 years the Earth-to-orbit weight lifting capability grew

by 10 thousand times. It was an age when a single main engine (and there were five) delivered 1.5 million pounds of thrust. In its twilight years Saturn lifted a Skylab module weighing 100 metric tons into orbit not 15 years after our nation have trouble lifting a satellite the size of a grapefruit.

Landing on the moon would be made in a spider-like spacecraft so flimsy it could not bear its own weight on Earth. The sides of the Lunar Module were paper-thin sheets of gold colored foil. The seats were removed for weight due to a strict diet. It required no aerodynamic considerations at all. It was the world's first true spacecraft.

For all the complexity the Apollo launch vehicles were reliable. The 10 Saturn I, the 9 Saturn IB and the 13 Saturn V rockets all flew successfully. Confidence was so high that after only two unmanned Saturn V missions NASA chose to send Apollo 8 around the moon.

In a scant 70 years America had traveled from Kitty Hawk to the moon. Benjamin Foulois had learned to fly from the Wright Brothers only to pin medals on Mercury astronauts. Edwin Aldrin, Sr., knew the Wrights, Goddard and Lindbergh, and watched his son walk on the moon.

SA-1

Port Canaveral Hand Cancel

27 Oct 1961

Saturn was three times taller, required six times more fuel and produced ten times more thrust than the Jupiter-C launched just four years before. The first stage and two dummy upper stages flew to a height of 136.5 km and impacted 345.7 km downrange meeting all objectives.

SA-2

Port Canaveral Hand Cancel

25 Apr 1962

Project High Water was designed to study the effects of radio transmissions with changes in local weather conditions. The rocket would lift 109,000 liters of water and detonate two minutes after launch creating a large artificial cloud.

USS Guadalcanal Type I Variant 1 Hand Cancel

13 Mar 1969

After 10 days, 1 hour, and 1 minute, Apollo 9 splashed safely down in the Atlantic, northeast of Puerto Rico. Within an hour the crew was aboard the carrier.

Ap-9

USS Guadalcanal Type II Hand Cancel

13 Mar 1969

An exceedingly rare Captain's cover that includes crew and Navy rubber stamp art. Sean Marsar bought and resold them from a sailor attending a Tailhook Association gathering in the 1980s. This cover came from an auction sale in 2008.

Ap-10

Patrick Air Force Base Hand Cancel

18 May 1969

The lunar landing dress rehearsal was needed to check LM guidance and navigation in the Moon's uneven gravitational field. There were also tracking, communications and site selection reconnaissance needed. The all-veteran crew would be busy.

Ap-10

Kunia Hand Cancel

26 May 1969

In 1969 Fleet Operations Control Center, Pacific (FOCCPAC) was based at Kunia. With the extreme reentry speeds associated with lunar return, spacecraft recoveries which were usually accomplished in the Atlantic during the Mercury program, were now conducted in the Pacific.

Ap-10

USS Princeton Machine Cancel

26 May 1969

Virtually all Ap-10 PRS postmarks are like this machine cancel.

Ap-10

USS Ozark Hand Cancel

26 May 1969

Beck CREW cover with VIP address label on Secondary Recovery Ship.

Ap-10

USS Princeton Hand Cancel

26 May 1969

This airmail entire is unusual in several respects. The crew would all be Commanders (Stafford Ap-10, Young Ap-16, and Cernan Ap-17), the rubber stamp is unknown in black, and virtually all postmarks that day used the smaller machine cancel.

Ap-10

USS Princeton Machine Cancel

26 May 1969

A scarce Captain's cover. On 26 May 1969, Apollo 10 streaked through the early morning darkness like a shooting star, splashing down 690 km from Samoa and 6 km from the carrier.

Ap-10

USS Princeton Hand Cancel

26 May 1969

An even scarcer Captain's cover due to a rare Hand Cancel.

Ap-11

Kennedy Space Center Machine Cancel

16 Jul 1969

This envelope NASA Exchange mission emblem cover was probably sent from a family member (initials RBM) who worked in the Vehicle Assembly Building (VAB).

Ap-11

Houston Backdated (?) Machine and Hand Cancel

20 Jul 1969

Europeans consider 21 Jul 1969 the moon landing date (GMT) but the controlling time zone was in Houston. This cover has a Machine Cancel (lost in the black of the stamp) and a Hand Cancel. Were both backdated since the moon landing was on a Sunday?

Ap-11

USS Hornet Type I Machine Cancel

24 Jul 1969

The vehicle dipped down into the atmospheric layer, zipped up in a roller coaster curve out of the layer, and then came screaming back in. The drogue parachutes opened, and the ship steadied. Below they heard recovery forces trying to talk following the communications blackout.

Ap-11

USS Hornet Type II Machine Cancel

24 Jul 1969

Columbia landed close to its target and flipped over on its nose in the water, but a flick of a switch inflated the air bags and it soon turned upright.

Ap-11

USS Hornet Hand Cancel Variant 1

24 Jul 1969

The add-on cachet here is made from the fireproof beta cloth that has covered astronaut spacesuits since the Apollo 1 fire.

Ap-11

USS Hornet Hand Cancel

24 Jul 1969

6000 Captain's covers were created. A few Navy brass and the astronauts received 25 each while members of the crew were given two each. This one entered the mail stream from a crew member.

Ap-12

Kennedy Space Center Machine Cancel (Open globe)

14 Nov 1969

Al Bishop created "Insurance" covers (this one for an all-Navy crew) that astronauts could leave with family in the event that they failed to return. Later these were sold or given as gifts.

Ap-12

Kennedy Space Center Machine Cancel (Closed globe)

14 Nov 1969

Paul Savko, an employee of Bendix, suggested the contractor publicize the company's participation in the space program. A different cachet was made for each Apollo mission.

Ap-12

USS Hornet Type I Variant 2 Hand Cancel

24 Nov 1969

Although not rare, Hand Cancels for Apollo 12 are less common and are found with several variants. This Type I Variant 2 (19691124HTIV2CVS-12) has a widely spaced "AM" below the year.

Ap-12

USS Hornet Machine Cancel

24 Nov 1969

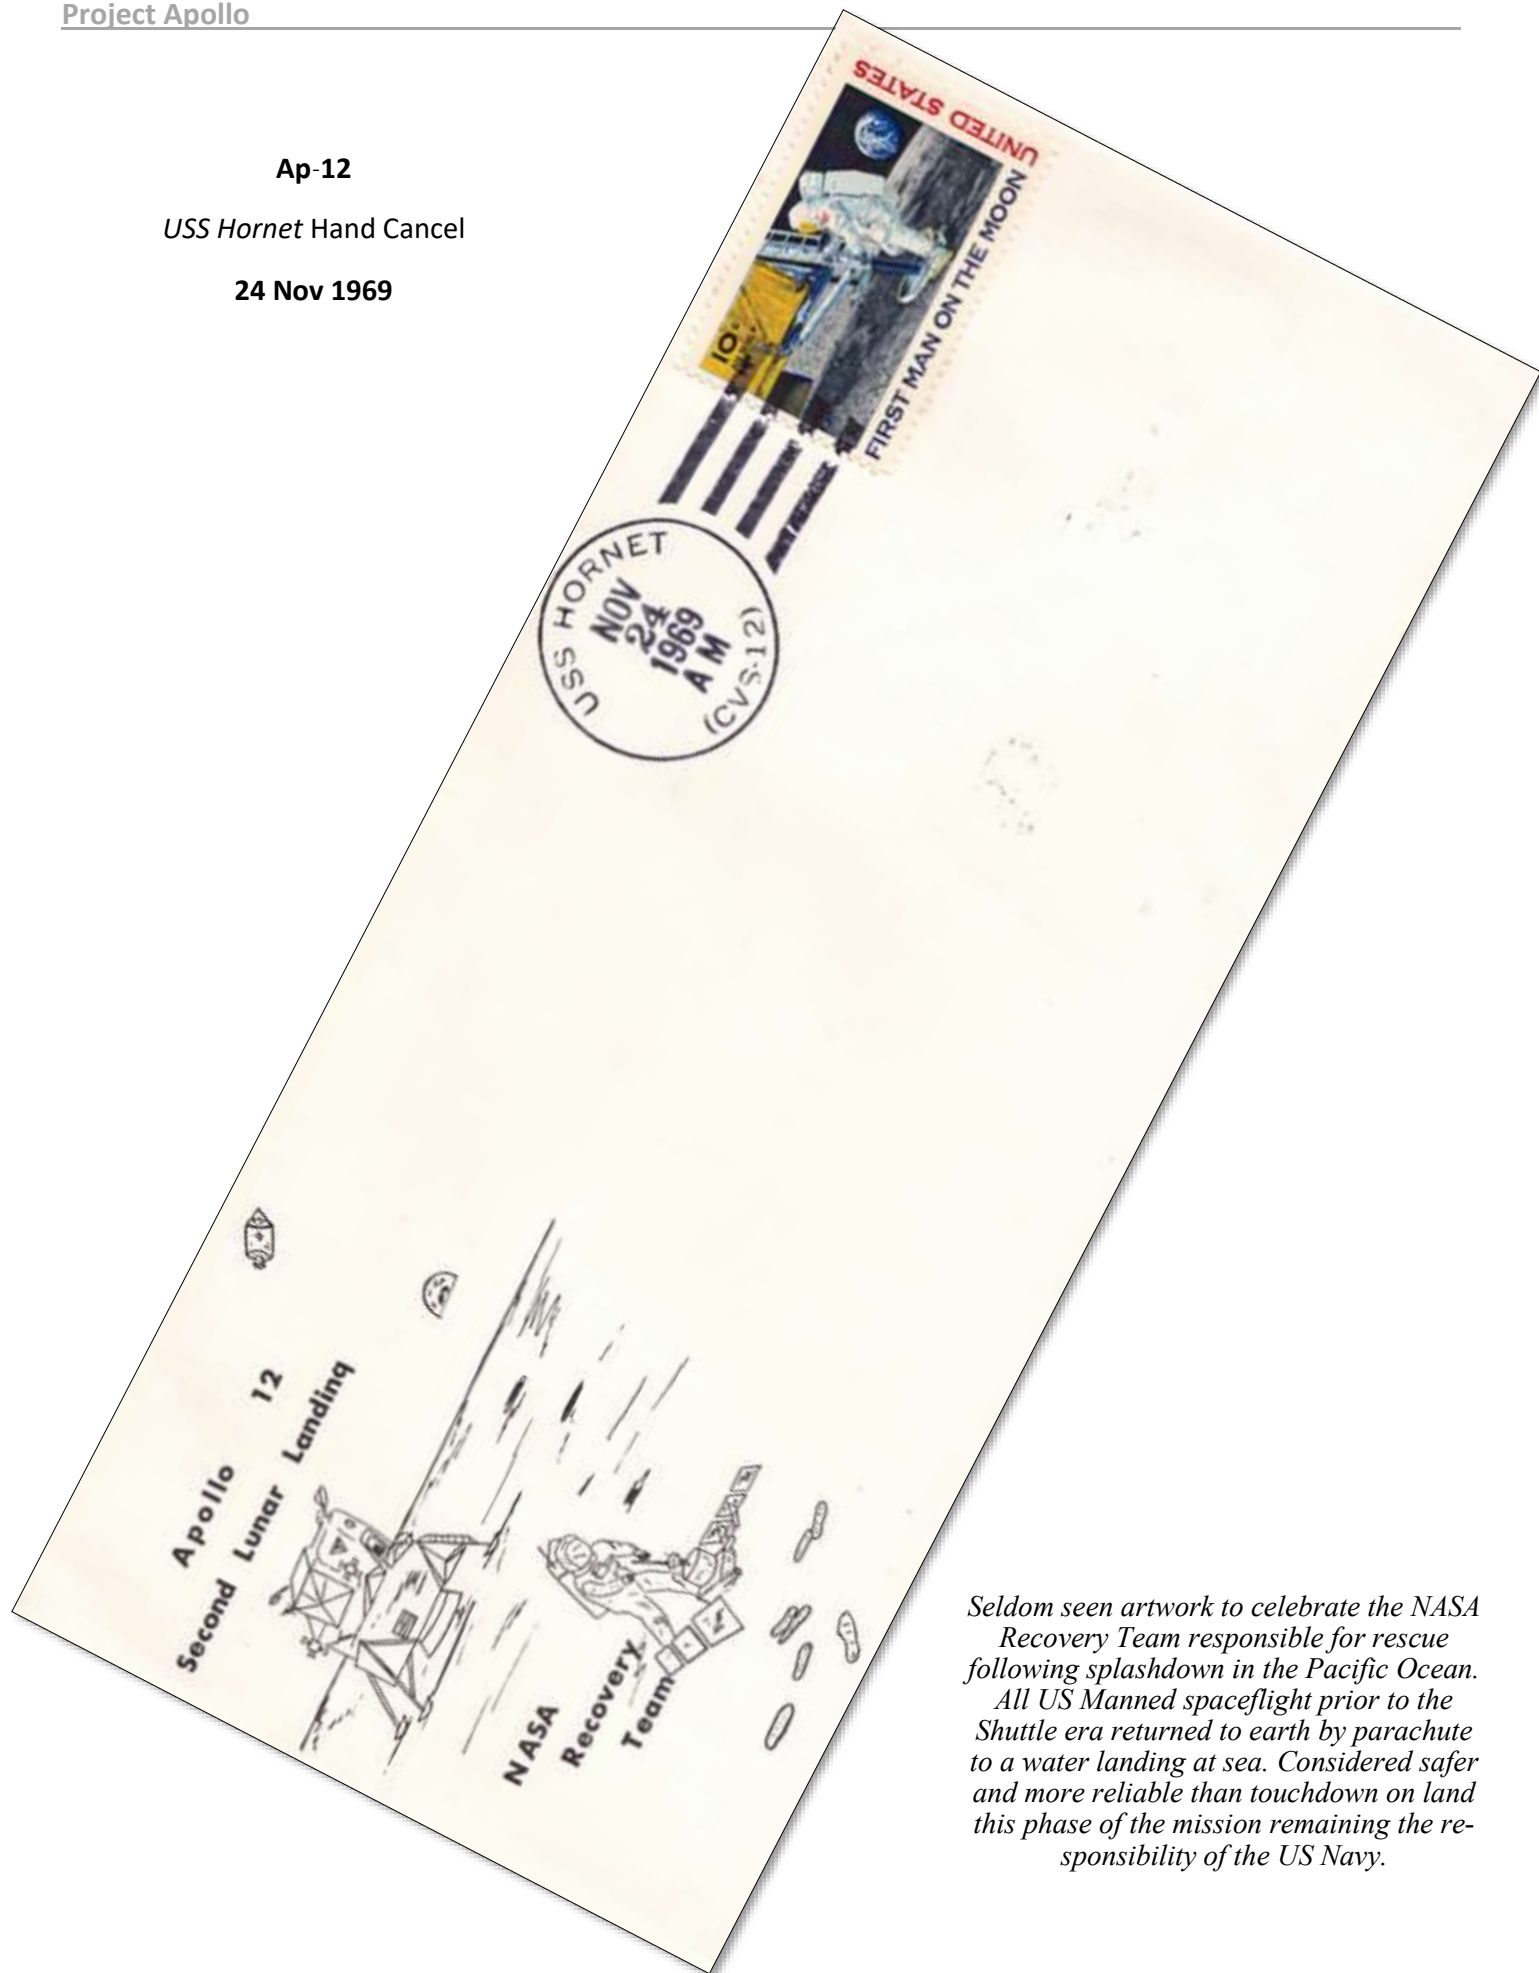

A Captain's cover postally used from a member of the crew.

Ap-12

USS Hornet Hand Cancel

24 Nov 1969

Seldom seen artwork to celebrate the NASA Recovery Team responsible for rescue following splashdown in the Pacific Ocean. All US Manned spaceflight prior to the Shuttle era returned to earth by parachute to a water landing at sea. Considered safer and more reliable than touchdown on land this phase of the mission remaining the responsibility of the US Navy.

Ap-13

Kennedy Space Center Hand Cancel

11 Apr 1970

KSC "Officials" are found in red or blue. Occasionally, Ap-12 and Ap-13 appear more black than blue. The Helios unmanned mission to the Sun was printed in black. Here an uncommon hand stamp postmarks an envelope sent to a collector in West Germany.

Ap-13

Kennedy Space Center Machine Cancel (Open globe)

11 Apr 1970

Two days before launch, Jack Swigert joined the crew replacing Ken Mattingly who had been exposed to German Measles. Fortunately, the mission emblem (with the exception of Ap-11) was the only Apollo patch not to feature the names of the pilots.

Ap-13

Kennedy Space Center Machine Cancel (Closed globe)

11 Apr 1970

When Jack Swigert replaced Tom Mattingly two days before the flight there was insufficient time to reprint the VIP cards to commemorate the flight. A rubber stamp was used.

Unused VIP card on green postcard. Ray Cartier suspects the colored stock might have been used to demarcate stacks of a set number of cards.

Ap-13

Grand Bahama Hand Cancel

17 Apr 1970

Joseph Frasketi, an astrophilatelist and space cover servicer, was manning the Telemetry Tracking Site at the Eastern Test Range (ETR) Grand Bahama facility on the day following the explosion. On this date the crew performed the critical loop around the Moon to return home.

Ap-13

USS Iwo Jima Type II Variant 2 Hand Cancel

17 Apr 1970

The possibility of heat shield damage from the explosion heightened tensions during the blackout period, which took 33 seconds longer than normal. Odyssey regained radio contact and splashed down safely southeast of American Samoa and 6.5 km from the recovery ship.

Ap-14

Kennedy Space Center Machine Cancel (Closed globe)

31 Jan 1971

After regaining flight status, Mercury astronaut Alan Shepard (with 15 minutes of flight time under his belt) jumped to the head of the line and took two rookies to the Moon.

Ap-14

USS New Orleans Hand Cancel

9 Feb 1971

The LM radar altimeter failed to lock onto the moon's surface. After the landing radar breaker was cycled, the unit successfully acquired a signal. Shepard then manually landed the LM. Mitchell believes Shepard would have continued with the landing attempt anyway but a post-flight review of the descent data showed the inertial system alone would have been inadequate, and the astronauts probably would have been forced to abort the landing as they approached the surface.

AP-14

Raoul Island Hand Cancel

10 Feb 1971

This envelope nicely explains the concept of the nearest post office and current date in order to be astrophilatelically correct.

If the US Navy didn't have a post office on board the Prime Recovery Ship (PRS) then the closest would have been Raoul in New Zealand. The postmark would also reflect that, across the International Date Line, it was already February 10th.

The impact point was about 0.6 n mi from the target point and 3.8 n mi from the recovery ship USS New Orleans. Estimated distance traveled for the mission was 1,000,279 nautical miles.

Ap-15

Kennedy Space Center Machine Cancel (Open globe)

26 Jul 1971

J missions were far more science-intensive. Most significant was the installation of an instrument module in one of the service module bays for scientific investigations from lunar orbit and a scientific subsatellite to be deployed into lunar orbit. LM modifications permitted a greater payload, a longer stay on the lunar surface, and provision of a lunar rover vehicle (LRV).

Ap-15

Kunia Hand Cancel

26 Jul 1971

Inner and Outer Space multicolor cachet postmarked at the headquarters of Task Force 130.

Ap-15

Kennedy Space Center Machine Cancel (Closed globe)

26 Jul 1971

Col Worden emphatically asserts that only envelopes with the Antarctic Treaty stamp and the Manned Spacecraft Stamp Club cachet are true "Insurance" covers.

Ap-15

Kennedy Space Center Machine Cancel (Closed globe)

26 Jul 1971

Widely recognized as a Bishop Insurance cover from the all Air Force crew. Recently Col. Worden claimed that these were signed upon their return and are NOT Insurance covers.

Ap-15

Kennedy Space Center Machine Cancel (Open globe)

26 Jul 1971

During checkout of the LRV, it was found that the front steering mechanism was inoperative and there were no readouts on the battery #2 ampere/volt meter. Scott intended to contact AAA but left his membership card in his other spacesuit. This unflown example of the Irwin "lucky" clover came from Ray Burton, the collector who provided them to the astronaut.

Ap-15

Kennedy Space Center Machine Cancel (Closed globe)

26 Jul 1971

A unflown onion skin light weight envelope. This type was used for the Apollo 15 moon covers including the infamous Seiger covers. Scott had agreed to carry 100 envelopes in exchange of \$7,000 college fund accounts for the crew's children. A scandal erupted and none ever flew again.

Ap-15

USS Okinawa Type II Hand Cancel

7 Aug 1971

An innocuous Prime Recovery Ship envelope except for the recently released Decade of Achievement stamps flown out to the USS Okinawa especially for the astronauts and found on all their moon covers.

Ap-15

USS Okinawa Type I Hand Cancel

7 Aug 1971

A collapsed parachute contributed to the fastest entry time in the Apollo program, just 778.3 seconds from entry to splashdown. Impact was 1.0 nautical mile from the target point and 5 nautical mile from the recovery ship USS Okinawa.

Ap-16

Kennedy Space Center Machine Cancel (Open globe)

16 Apr 1972

The second of the “J missions” meant three days on the moon and more science.

Ap-16

Kennedy Space Center Machine Cancel (Closed globe)

16 Apr 1972

A malfunction in a backup yaw gimbal servo loop of Casper caused concerns about firing the engine to adjust the CSM's lunar orbit, and nearly caused the Moon landing to be aborted. Young and Duke, who were undocked and flying LM Orion when the problem occurred, were permitted to land on the Moon.

Ap-16
